

# White Station High School

## AP Chemistry Summer Assignment: 2023/2024

Teacher: George Richardson

Each student is expected to perform the following **Five** tasks during the summer.

- 1) **Access the ONLINE** copy of the text book. *Chemistry, 8<sup>th</sup> ed. Zumdahl, S., Houghton Mifflin Co, 2008. ISBN#: 978-0-547-12532-9 (Note: This is the Advanced Placement Student edition)* This file is an ONLINE version of the text, and can be found at the following link:  
[https://drive.google.com/file/d/0B73r\\_GOwSAbkT1Mzb05WN1oxWXM/view?usp=sharing](https://drive.google.com/file/d/0B73r_GOwSAbkT1Mzb05WN1oxWXM/view?usp=sharing)
- 2) **Create** a “double entry” summary or study guide for the following four chapters, (For you special students, that is **Chapter #5, #14, #19 & #22.**)  
The Summary should include an outline of the chapter (left hand side of the double entry journal) **and** short sentence or phrase for each significant concept, equation, person, etc... (on the right hand side of the double entry journal) *See an example on the reverse side (Time: 3 – 5 hours)*
- 3) **Study** (Time: 4 – 6 hours)
  - a. **Gas Law (chapter 5):** Know the three fundamental laws: Charles, Boyles, and Avogadro. Know the combined gas law, ideal gas law, gas stoichiometry, Dalton’s Partial Pressures, Kinetic Molecular Theory of gases, Effusion, Diffusion, and Deviation from ideal gas law behavior (i.e. Real Gases). **Complete** the attached GAS LAW Problem WS.
  - b. **Limiting Reactants** (review from HonorsChem) - Complete the attached WS
  - c. **Balancing Equations** (review from HonorsChem) Complete the attached WS
- 4) **There are Three (3) major concepts General Chemistry I & II.**  
**They are le Chatelier’s principle, Intermolecular forces (IMF’s), and Coulumb’s force of attraction.** You must “research” these three principles and prepare a short paper discussing each, including their significance, history, and application to chemistry. **Be prepared to present your findings.** (proper MLA/APA citations are expected.)  
(Time: 1 – 2 hours)
- 5) **Oh, Know the names/symbols and charges of the polyatomic ions!**  
Be ready for quiz the first week of class.

**Each task will be graded:**

- a) Obtain a text book: (50 point Home Work grade)
- b) Double Entry Journal (50 point EXAM grade)
- c) Gas Law Problems (25 point Quiz grade)
- d) Limiting Reactants Problems (25 point Homework grade)
- e) Balancing Equations (25 point Homework grade)
- f) Short paper discussion and presentation (50 point LAB grade).
- g) Polyatomic Quiz(s) – First week of class (25 point Quiz grade)

**Double Entry Journal and Short papers are due the first day of class.** Note: I will **NOT** accept **ANY** late work for *full credit*.

My goal is to spend a bare minimum of time reviewing the basics and stuff you should already know and get through “gas law’s” which are relatively easy. I want to move through the first part of the book rapidly. Your journal for the chapters will facilitate this process. *ALSO: Refer to my Web Site for additional information:*

[www.wshsAPChemistry.com](http://www.wshsAPChemistry.com)

I look forward to an exciting 2023/2024 AP Chemistry class! Thank you.

Here is *an example of* a double entry journal  
(Note: the content on left - matches up with the comments on the right.)

## Zumdahl, 8<sup>th</sup> ed.

### Chapter 15: Application of Acid/Base Equilibrium

1. Solutions – common ions ----- >
- 2.

- a. Common ions ----- >

- b. Common ion effect

- c. Equilibrium concentrations

3. Buffer solutions

- a. Definition – A solution that resists a change in the pH.

4. Buffer capacity
5. Titration and titration curves

ETC.....

*This is a continuation of acid/base chapter, adding a new demotion of common ions and more complex applications of the ICE box method.*

*Common ion is an ions (ions are charged species) that is present in two different disassociation reactions within the same solution. Example: a weak acid only partially dissociates, into “ions”, thus there is un-dissolved acid AND  $H^+$  and conjugate base ions in solution. A second reaction adds a common ion (likely the conjugate base ion) Thus the equilibrium is shifted.*

*An application of the “Le Chatelier” principle where the equilibrium concentrations are shifted to release “strain”.*

*using the ICE box methods used for weak acids/bases (Chapter 14) determine the equilibrium concentrations with the addition of “common” ions. Thus, the starting concentrations of the “products” will not necessarily start as zero.*

ETC.....

Oh, you should know these!!!

### Symbols and Charges for Polyatomic Ions

Formula	Name
<b>1+</b>	
$\text{NH}_4^+$	Ammonium
<b>1-</b>	
$\text{C}_2\text{H}_3\text{O}_2^-$	Acetate * $\text{CH}_3\text{COO}^-$
$\text{NH}_2^-$	Amide
$\text{BrO}_3^-$	Bromate
$\text{BrO}_2^-$	Bromite
$\text{BrO}^-$	Hypobromite
$\text{ClO}_4^-$	Perchlorate
$\text{ClO}_3^-$	Chlorate
$\text{ClO}_2^-$	Chlorite
$\text{ClO}^-$	Hypochlorite
$\text{CN}^-$	Cyanide
$\text{H}_2\text{PO}_4^-$	Dihydrogen phosphate
$\text{HCO}_3^-$	Hydrogen carbonate (bicarbonate)
$\text{HC}_2\text{O}_4^-$	Hydrogen oxalate (binoxalate)
$\text{HSO}_4^-$	Hydrogen sulfate (bisulfate)
$\text{HS}^-$	Hydrogen sulfide
$\text{HSO}_3^-$	Hydrogen sulfite (bisulfite)
$\text{OH}^-$	Hydroxide
$\text{IO}_4^-$	Periodate
$\text{IO}_3^-$	Iodate
$\text{IO}_2^-$	Iodite
$\text{IO}^-$	Hypoiodite
$\text{NO}_3^-$	Nitrate
$\text{NO}_2^-$	Nitrite
$\text{MnO}_4^-$	Permanganate

Formula	Name
<b>2-</b>	
$\text{CrO}_4^{2-}$	Chromate
$\text{CO}_3^{2-}$	Carbonate
$\text{Cr}_2\text{O}_7^{2-}$	Dichromate
$\text{SiF}_6^{2-}$	Hexafluorosilicate
$\text{HPO}_4^{2-}$	Hydrogen phosphate
$\text{C}_2\text{O}_4^{2-}$	Oxalate
$\text{O}_2^{2-}$	Peroxide
$\text{SeO}_4^{2-}$	Selenate
$\text{SiO}_3^{2-}$	Silicate
$\text{SO}_4^{2-}$	Sulfate
$\text{SO}_3^{2-}$	Sulfite
$\text{C}_4\text{H}_4\text{O}_6^{2-}$	Tartrate
$\text{B}_4\text{O}_7^{2-}$	Tetraborate
$\text{S}_2\text{O}_3^{2-}$	Thiosulfate
<b>3-</b>	
$\text{AsO}_4^{3-}$	Arsenate
$\text{BO}_3^{3-}$	Borate
$\text{PO}_4^{3-}$	Phosphate
$\text{PO}_3^{3-}$	Phosphite
$\text{C}_6\text{H}_5\text{O}_7^{3-}$	Citrate
<b>4-</b>	
$\text{SiO}_4^{4-}$	Orthosilicate
$\text{P}_4\text{O}_7^{4-}$	Pyrophosphate

\* An alternate way to write acetate is  $\text{CH}_3\text{COO}^-$

Note: Writing just the plus sign or minus sign for ions with  $1^+$  or  $1^-$  charges are acceptable.

#### PREFIXES USED FOR NAMING COVALENT COMPOUNDS:

mono = 1	tetra = 4	hepta = 7	deca = 10
di = 2	penta = 5	octa = 8	
tri = 3	hexa = 6	nona = 9	

Anion	Acid
ate	ic acid
ite	ous acid
ide	hydro- ic acid

Oh, you should know these too!!

### Symbols and Charges for Monatomic Ions Fixed Charge

SYMBOL	NAME
<b>1+</b>	
H <sup>+</sup>	Hydrogen
Li <sup>+</sup>	Lithium
Na <sup>+</sup>	Sodium
K <sup>+</sup>	Potassium
Rb <sup>+</sup>	Rubidium
Cs <sup>+</sup>	Cesium
Ag <sup>+</sup>	Silver
<b>2+</b>	
Be <sup>2+</sup>	Beryllium
Mg <sup>2+</sup>	Magnesium
Ca <sup>2+</sup>	Calcium
Cd <sup>2+</sup>	Cadmium
Sr <sup>2+</sup>	Strontium
Ba <sup>2+</sup>	Barium
Zn <sup>2+</sup>	Zinc
<b>3+</b>	
Al <sup>3+</sup>	Aluminum
Bi <sup>3+</sup>	Bismuth
La <sup>3+</sup>	Lanthanum

SYMBOL	NAME
<b>1-</b>	
H <sup>-</sup>	Hydride
F <sup>-</sup>	Fluoride
Cl <sup>-</sup>	Chloride
Br <sup>-</sup>	Bromide
I <sup>-</sup>	Iodide
<b>2-</b>	
O <sup>2-</sup>	Oxide
S <sup>2-</sup>	Sulfide
Se <sup>2-</sup>	Selenide
Te <sup>2-</sup>	Telluride
<b>3-</b>	
N <sup>3-</sup>	Nitride
P <sup>3-</sup>	Phosphide
As <sup>3-</sup>	Arsenide
<b>4-</b>	
C <sup>4-</sup>	Carbide

Note that the letters in an ion's name before the **-ide** ending is the stem.  
For example, the stem for bromide is **brom-**.

### Symbols and Charges for Monatomic Ions Variable Charge

Symbol	Systematic name		Symbol	Systematic name	
	(Stock system)	Common name		(Stock system)	Common name
Cr <sup>2+</sup>	Chromium (II)	Chromous	Pb <sup>4+</sup>	Lead (IV)	Plumbic
Cr <sup>3+</sup>	Chromium (III)	Chromic	Mn <sup>2+</sup>	Manganese (II)	Manganous
Co <sup>2+</sup>	Cobalt (II)	Cobaltous	Mn <sup>3+</sup>	Manganese (III)	Manganic
Co <sup>3+</sup>	Cobalt (III)	Cobaltic	Hg <sub>2</sub> <sup>2+</sup>	Mercury (I)	Mercurous
Cu <sup>+</sup>	Copper (I)	Cuprous	Hg <sup>2+</sup>	Mercury (II)	Mercuric
Cu <sup>2+</sup>	Copper (II)	Cupric	Ni <sup>2+</sup>	Nickel (II)	Nickelous
Fe <sup>2+</sup>	Iron (II)	Ferrous	Ni <sup>3+</sup>	Nickel (III)	Nickelic
Fe <sup>3+</sup>	Iron (III)	Ferric	Sn <sup>2+</sup>	Tin (II)	Stannous
Au <sup>+</sup>	Gold (I)	Aurous	Sn <sup>4+</sup>	Tin (IV)	Stannic
Au <sup>3+</sup>	Gold (III)	Auric	V <sup>2+</sup>	Vanadium (II)	Vanadous
Pb <sup>2+</sup>	Lead (II)	Plumbous	V <sup>3+</sup>	Vanadium (III)	Vanadic

# AP Chemistry Summer Work – GAS LAW Problems

Name: \_\_\_\_\_ Date Submitted: \_\_\_\_\_

Period: \_\_\_\_\_

(Note: You must show ALL WORK and justifications of your answer.)

1. On a hot sunny day in August, the weatherman reports that the barometric pressure is 36 atm (atmospheres). How many Pascals is this? Answer in units of Pascals
2. Suppose that a sample of gas occupies 83 mL of volume at 25°C and a pressure of 242 torr. What would be the volume if the pressure were changed to 502 torr at 25°C? Answer in units of mL
3. A 1.50 liter tank filled with helium at 125 atm is used to fill balloons. The pressure in each balloon is 950 torr and the volume of each balloon is 1.20 liters. How many balloons can be filled? Answer in units of balloons
4. To what temperature must a sample of helium gas be cooled from 130°C to reduce its volume from 3.2 L to 0.48 L at constant pressure? Answer in units of K
5. A sample of gas occupies 5 mL at STP. At what pressure would this sample occupy 500 mL if the temperature is changed to 525°C? Answer in units of torr.
6. What is the density of hydrogen sulfide ( $\text{H}_2\text{S}$ ) at 1.7 atm and 277 K? Answer in units of g/L
7. What pressure would a mixture of 3.2 grams of  $\text{O}_2$ , 6.4 grams  $\text{CH}_4$ , and 6.4 grams of  $\text{SO}_2$  exert if the gases were placed in a 4.2 liter container at 127°C? Answer in units of atm
8. Jeff and Jill go canoeing. While reaching to feed a duck, the boat flips. Jeff and Jill blow up their inflatable life preservers and then put them on. As they wait for the rescue squad, they calculate how much nitrogen is in each life preserver. They estimate that the volume is 14 L, pressurized to 1.4 atm at 25°C. The air used for inflation is 80% nitrogen by volume and 20% oxygen by volume. Give the amount of nitrogen gas. Answer in units of gram
9. We mix 119 grams of oxygen gas with 176 grams of argon gas in a volume of 520 mL at 116°C. What will be the final pressure of the gas mixture? Answer in units of atm
10. A 8.4 gram sample of a gaseous substance occupies 16 L at 24°C and 596 torr. What is the density of the gas under these conditions? Answer in units of g/L
11. We observe that 8 grams of a gaseous compound occupies 2099 mL at 52°C and 693 torr. What is the molecular weight of the compound? Answer in units of g/mol
12. We drop 36.1 grams of magnesium into 474 mL of a 4 M HCl solution. What is the maximum volume of dry hydrogen that could be produced by this reaction at STP?  $\text{Mg(s)} + 2\text{HCl(aq)} \rightleftharpoons \text{MgCl}_2\text{(aq)} + \text{H}_2\text{(g)}$  Answer in units of liters
13. An apparatus consists of a 2 L flask containing nitrogen gas at 27°C and 709 kPa, joined by a valve to a 7 L flask containing argon gas at 27°C and 42.9 kPa. The valve is opened and the gases mix. What is the partial pressure of nitrogen after mixing? Answer in units of kPa
14. What is the partial pressure of argon after mixing? Answer in units of kPa
15. What is the total pressure of the gas mixture? Answer in units of kPa
16. A 322 mL sample of nitrogen ( $\text{N}_2$ ) was collected by displacement of water at 24°C under a total barometric pressure of 573 torr. What mass of dry nitrogen was collected? The vapor pressure of water at 24°C is 22 torr. Answer in units of g
17. The rate of effusion of unknown gas X is found to be about 1.7 times that of  $\text{SF}_6$  gas (MW = 146 g/mol) at the same conditions of temperature and pressure. What is the molecular weight of gas X? Answer in units of g/mol

**AP Chemistry - Summer Work: 2018-19****Limiting Reagent Problems**

Name: \_\_\_\_\_ Date Submitted: \_\_\_\_\_ Period: \_\_\_\_\_

*Note: You must show ALL WORK, and justify (prove) every answer. ie. T-Charts!*

1. 15.00 g aluminum sulfide and 10.00 g water react until the limiting reagent is used up. Here is the balanced equation for the reaction:  $\text{Al}_2\text{S}_3 + 6 \text{H}_2\text{O} \longrightarrow 2\text{Al}(\text{OH})_3 + 3 \text{H}_2\text{S}$

(A) Which is the limiting reagent?

(B) What is the maximum mass of  $\text{H}_2\text{S}$  which can be formed from these reagents?

(C) How much excess reagent remains after the reaction is complete?

2. Given the following equation:  $2 \text{KClO}_3 \longrightarrow 2 \text{KCl} + 3 \text{O}_2$

How many moles of  $\text{O}_2$  can be produced by letting 12.00 moles of  $\text{KClO}_3$  react?

3. Given the following equation:  $2 \text{K} + \text{Cl}_2 \longrightarrow 2 \text{KCl}$

How many grams of  $\text{KCl}$  is produced from 2.50 g of  $\text{K}$  and 1.00 g of  $\text{Cl}_2$  ?

4. Given the following equation:  $\text{Na}_2\text{O} + \text{H}_2\text{O} \longrightarrow 2 \text{NaOH}$

How many grams of  $\text{NaOH}$  is produced from  $1.20 \times 10^2$  grams of  $\text{Na}_2\text{O}$ ? How many grams of  $\text{Na}_2\text{O}$  are required to produce  $1.60 \times 10^2$  grams of  $\text{NaOH}$ ?

5. Given the following equation:  $8 \text{Fe} + \text{S}_8 \longrightarrow 8 \text{FeS}$

What mass of iron is needed to react with 16.0 grams of sulfur? How many grams of  $\text{FeS}$  are produced?

6. Given the following equation:  $2 \text{NaClO}_3 \longrightarrow 2 \text{NaCl} + 3 \text{O}_2$

12.00 moles of  $\text{NaClO}_3$  will produce how many grams of  $\text{O}_2$ ? How many grams of  $\text{NaCl}$  are produced when 80.0 grams of  $\text{O}_2$  are produced?

7. Given the following equation:  $\text{Cu} + 2 \text{AgNO}_3 \longrightarrow \text{Cu}(\text{NO}_3)_2 + 2 \text{Ag}$

How many moles of  $\text{Cu}$  are needed to react with 3.50 moles of  $\text{AgNO}_3$ ? If 89.5 grams of  $\text{Ag}$  were produced, how many grams of  $\text{Cu}$  reacted?

8. Molten iron and carbon monoxide are produced in a blast furnace by the reaction of iron(III) oxide and coke (pure carbon). If 25.0 kilograms of pure  $\text{Fe}_2\text{O}_3$  and 6.50 grams of  $\text{C}$  are used, how many kilograms of iron can be produced? The reaction is:  $\text{Fe}_2\text{O}_3 + 3 \text{C} \longrightarrow 2 \text{Fe} + 3 \text{CO}$

9. Given the reaction:  $4 \text{NH}_3 (\text{g}) + 5 \text{O}_2 (\text{g}) \longrightarrow 4 \text{NO} (\text{g}) + 6 \text{H}_2\text{O} (\text{l})$

When 1.20 mole of ammonia reacts, the total number of moles of products formed is:

a. 1.20    b. 1.50    c. 1.80    d. 3.00    e. 12.0    AND Explain why?

10. Determine moles of  $\text{Na}_2\text{S}$  that can be prepared by the reaction of 0.2240 moles of sodium with 0.1320 moles of sulfur. Which reactant is the limiting factor?

11. Disulfur dichloride,  $\text{S}_2\text{Cl}_2$ , is used to vulcanize rubber. It can be made by treating molten sulfur with gaseous chlorine:  $\text{S}_8(\text{l}) + 4 \text{Cl}_2(\text{g}) \rightarrow 4 \text{S}_2\text{Cl}_2(\text{l})$

Starting with a mixture of 32.0 g of sulfur and 71.0 g of  $\text{Cl}_2$ , which is the limiting reactant? What mass of  $\text{S}_2\text{Cl}_2$  (in grams) can be produced? What mass of the excess reactant remains when the limiting reactant is consumed?

12. Aspirin ( $\text{C}_9\text{H}_8\text{O}_4$ ) is produced by the reaction of salicylic acid ( $\text{C}_7\text{H}_6\text{O}_3$ ) and acetic anhydride ( $\text{C}_4\text{H}_6\text{O}_3$ ).

If you mix 100. g of each of the reactants, what is the maximum mass of aspirin that can be obtained?

13. Disulfur dichloride, which has a revolting smell, can be prepared by directly combining  $\text{S}_8$  and  $\text{Cl}_2$ , but it can also be made by the following reaction:

Assume you begin with 5.23 g of  $\text{SCl}_2$  and excess  $\text{NaF}$ . What is the theoretical yield of  $\text{S}_2\text{Cl}_2$ ? If only 1.19 g of  $\text{S}_2\text{Cl}_2$  is obtained, what is the percent yield of the compound?

14. Hydrazine reacts with dinitrogen tetroxide according to the equation:

50.0 grams of hydrazine is mixed with 100.0 grams of dinitrogen tetroxide. How much nitrogen gas was produced?

# General Chemistry I - Fall 2023 - Richardson

## Balancing Worksheet

Name: \_\_\_\_\_ Date: \_\_\_\_\_

Balance the following reactions. (Note: several of these equations are already balanced). Circle any polyatomic ions and write their name. There are 50 problems in two columns

- |   |  |
|---|--|
| 1. $\text{H}_2 + \text{O}_2 \rightarrow \text{H}_2\text{O}$                                   | 26. $\text{N}_2 + \text{H}_2 \rightarrow \text{NH}_3$  |
| 2. $\text{S}_8 + \text{O}_2 \rightarrow \text{SO}_3$  | 27. $\text{N}_2 + \text{O}_2 \rightarrow \text{N}_2\text{O}$   |
| 3. $\text{HgO} \rightarrow \text{Hg} + \text{O}_2$  | 28. $\text{CO}_2 + \text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + \text{O}_2$                |
| 4. $\text{Zn} + \text{HCl} \rightarrow \text{ZnCl}_2 + \text{H}_2$                            | 29. $\text{SiCl}_4 + \text{H}_2\text{O} \rightarrow \text{H}_4\text{SiO}_4 + \text{HCl}$                         |
| 5. $\text{Na} + \text{H}_2\text{O} \rightarrow \text{NaOH} + \text{H}_2$                      | 30. $\text{H}_3\text{PO}_4 \rightarrow \text{H}_4\text{P}_2\text{O}_7 + \text{H}_2\text{O}$                      |
