GOLDEN WILDCAT GAZETTE

November 2022

ACADEMIC SHOWCASE

"Physical Science"

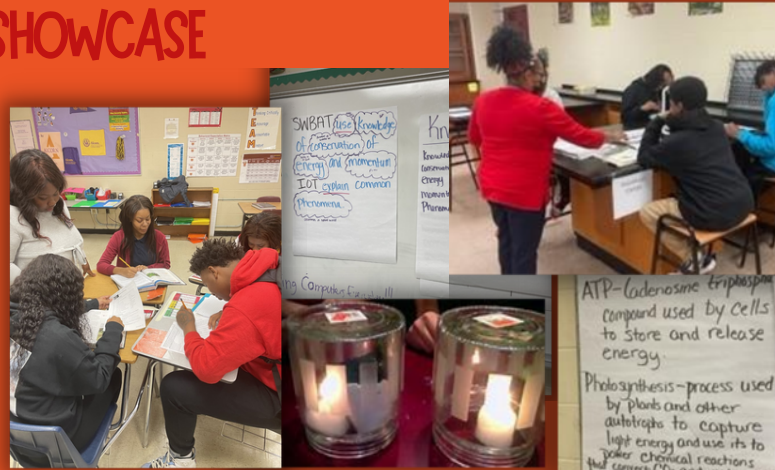

In Physical Science, we're working on Work and Energy. Students will be able to use knowledge of conservation of energy in order to explain common phenomena. Students are learning what work is and how they can do work with simple / compound machines. They are also learning how to obtain energy by working because with no energy, there's no work.

Ms. Burnett, Physical Science Teacher

"Biology"

"Science scholars are learning about "Photosynthesis." Students were introduced to the experiment "Photosynthesis in a Jar." The experiment is a representation of the famous experiment performed in the 1700's by Joseph Priestley who discovered Oxygen and Jan Ingenhousz who discovered photosynthesis. The experiment demonstrates the existence and importance of oxygen to plants and animals.

Ms. Webb, Biology Teacher
