

Moment in Black History:

Victor Glover

Victor Glover made history as the first African American NASA astronaut to live on the International Space Station. Victor Glover soared into space, piloting The SpaceX Crew-1 mission. He is knocking out several firsts with this flight. Glover is the first African American in space since Alvin Drew in 2007, the first astronaut to fly for SpaceX, and the first to move into the International Space Station for an extended stay. There have been other Black astronauts to visit the station while it was under construction, however they were members of space shuttle crews and their stays were brief.

You too have the potential to be the next great astronaut – If Victor Glover can do it, so can you!
